University of Arizona Law's Health Law & Policy program is composed of more than 35 online course offerings across four Certificate programs, spanning Regulatory Science, Health Law for Health Professionals, Aging Law & Policy, and Health Information Privacy, Compliance and Data Security. Each Certificate requires a student to complete four courses for a total of 12 credit units. Students may substitute courses across Certificates to tailor a personalized program to meet personal and professional goals. All courses and Certificates may be applied towards the following degree programs: Master of Legal Studies in Health Law & Policy (MLS), Master of Laws (LLM), Jura Doctor (JD), or Bachelor of Arts in Law (BA) for students taking undergraduate health law courses.

University of Arizona Law’s Health Law & Policy program offers research project opportunities for interested students. To learn more, please contact law-healthcare@arizona.edu.

**HEALTH LAW & POLICY CERTIFICATE PROGRAMS**

**Regulatory Science:** There is a large and increasing need for current and future pharmaceutical and medical device professionals, regulators, entrepreneurs and scientists to have specialized training in translating research into new interventions for safe and effective medical products.

**Health Law for Health Professionals:** Advance your career in health care by acquiring a fundamental understanding of the laws, regulations and ethics surrounding the health care industry. This Certificate covers a range of topics including, business arrangements with insurers and providers, delivery of health care, and scope of practice.

**Aging Law and Policy:** As the American population ages, there is an increasing need for professionals who work in the aging sector to better understand the legal and ethical issues that surround working later-in-life, long-term care, and the role of technology in changing how health care is monitored and delivered to older adults.

**Health Information Privacy, Compliance and Data Security:** In this digital age, it is essential for health professionals to be able to navigate the myriad of legal, ethical and regulatory issues that intersect with data use, privacy protection, and compliance. Organizations around the world are in need of guidance to ensure compliance with current laws and greater awareness of emerging legislation around health information privacy requirements. This Certificate reflects an innovative, multidisciplinary collaboration from academics across the University of Arizona in law, the health sciences and engineering.

### Regulatory Science

**Instructor:**

**Fall 1**
- Huong Huey, PhD, College of Law and Critical Path Institute

**Fall 2**
- Instructor: Stephen Karpe, PharmD, College of Law and Critical Path Institute

**Regulatory Science Course Study Project**
- **Graduate Level: Law 59A**
- **Undergraduate Level: Law 478A**

**Regulatory Science Colloquium**
- **Graduate Level: Law 695D**

**Health Law for Professionals**
- **Instructor:** Mabel Crescioni, DrPH, JD, LLM, Colleges of Law and Critical Path Institute

**Legal and Regulatory Aspects for Health Care Delivery**
- **Graduate Level: Law 578A**
- **Undergraduate Level: Law 478A**
- **Instructor:** Tracy Nuckels, JD, College of Law

**Introduction to Biomedical Informatics**
- **Graduate Level: Law 577**
- **Undergraduate Level: Law 477**
- **Instructor:** Vignesh Subbian, PhD, College of Life Sciences and Engineering

**Legal & Regulatory Fundamentals of Health Care Business**
- **Graduate Level: Law 579B**
- **Undergraduate Level: 479B**
- **Instructor:** Christopher Mathis, JD, MPA, College of Law

**Health Care Ethics**
- **Graduate Level: Law 515**
- **Instructor:** Laura Howard, PhD, College of Law and Critical Path Institute

**Public Health Law & Ethics**
- **Graduate Level: Law 608A**
- **Instructor:** Leisa Barragán, JD, College of Law and Public Health

**Liability & Regulation of Health Care Professionals**
- **Graduate Level: Law 580A**
- **Undergraduate Level: Law 480A**
- **Instructor:** Elizabeth Hall-Lipsy, JD, College of Law and Public Health

**Access to Investigative Medical Product: Clinical Trials, Expanded Access, & Right to Try**
- **Graduate Level: Law 59A**
- **Undergraduate Level: Law 490A**
- **Co-instructors:** Alixan Bateman-House, PhD, MPH, MA, College of Law and NYU Grossman School of Medicine, and Sage Gustafson, MA, College of Law and NYU Langone Health

**Legal and Regulatory Aspects for Health Care Delivery**

*Instructor:* Tracy Nuckels, JD, College of Law

Become familiar with the different models for how health care is organized and delivered through the licensure and accreditation process. The regulatory requirements for employment at health facilities through medical staff practice for patients access to drugs prior to approval and their right to try. (3 Units)

**Introduction to Biomedical Informatics**

*Instructor:* Vignesh Subbian, PhD, College of Life Sciences and Engineering

This course surveys the field of biomedical informatics, including the effective uses of biomedical data collected from individuals (patients) and populations for scientific inquiry, problem solving, and decision making. In addition, ethical, legal, and social implications of medical informatics are covered, with emphasis on technology ethics, digital health regulations, and privacy laws. (3 Units)

**Legal & Regulatory Fundamentals of Health Care Business**

*Instructor:* Christopher Mathis, JD, MPA, College of Law

Acquire a fundamental understanding of the financial management and regulatory issues in the health care field, specifically related to reimbursement, Medicare, and Medicaid, and federal laws governing fraud and abuse. Course also covers long-term care, in terms of planning, financing, and placement. (3 Units)

**Health Care Ethics**

*Instructor:* Laura Howard, PhD, College of Law and Critical Path Institute

Explore moral and ethical questions faced by health professionals in the delivery of health care services. What rights and responsibilities come with the role of a health care provider? Should a provider always disclose the full information? (3 Units)

**Public Health Law & Ethics**

*Instructor:* Leisa Barragán, JD, College of Law and Public Health

This course examines the constitutional understandings of public health interventions. In addition, students will learn about the ethical implications of local, state, tribal, and federal governments with respect to public health, and reflect on the balance between individual rights and governmental powers in protecting the public's health. (3 Units)

**Liability & Regulation of Health Care Professionals**

*Instructor:* Elizabeth Hall-Lipsy, JD, College of Law and Public Health

Gain an overview of the scope of practice licensing and compliance requirements that govern health professionals, along with training in the role of expert witness in litigation from the deposition process to trial. Administrative, civil and criminal processes for non-compliance will also be covered. (3 Units)

**Access to Investigative Medical Product: Clinical Trials, Expanded Access, & Right to Try**

*Co-instructors:* Alixan Bateman-House, PhD, MPH, MA, College of Law and NYU Grossman School of Medicine, and Sage Gustafson, MA, College of Law and NYU Langone Health

Trace the historical evolution of policy and clinical practice for patients access to drugs prior to approval by the Food and Drug Administration. Students examine existing and emerging challenges, such as therapeutic misconception, crowd-funding, real world data collection, and preapproval access to gene therapies. (3 Units)

**Health Information**

**Technology and Aging**

*Instructor:* Kathryn Huber, MD, MS, College of Law and University of Colorado School of Medicine

This course provides an in-depth look at the ethical, legal, and social challenges facing aging adults amidst the rise of novel technologies. Long-term care is at the forefront of data-driven technologies, which are regularly located as a way forward to address many pressing issues unique to older adults, including frailty, falls, and incontinence. (3 Units)

**Aging Law & Policy**

*Instructor:* Tera Sklar, JD, MPH, College of Law

Legal, ethical, and social issues arise in relation to caring for an older population. Special attention in this course is given to older adult living environments in the workplace, end-of-life issues, ethical, and social issues in the aging workforce, including “grandparents as parents,” and later-in-life marriage. (3 Units)

**Aging in America**

*Instructor:* Christopher Mathis, JD, MPH, College of Law

This course provides a fundamental understanding of legal and public health frameworks involved in the financing and delivery of care for the US aging population. Course covers funding models from Medicare and Medicaid, health care delivery to Medicare, and long-term care and aging-care giving. (3 Units)

**Aging and Social Justice**

*Instructor:* Laura Howard, PhD, College of Law

This course covers the terrain of age discrimination, social conceptions of older adults as burdensome and cultural biases that shape the role of the elderly as valuable contributors. (3 Units)

**Health Information Privacy, Compliance, and Data Security**

**Instructor:** Chas Miller, PhD, College of Law and Snell & Wilmer LLP

Gain an overview of the scope of practice licensing and compliance requirements that govern health professionals, along with training in the role of expert witness in litigation from the deposition process to trial. Administrative, civil and criminal processes for non-compliance will also be covered. (3 Units)

**Introduction to Biomedical Informatics**

*Instructor:* Vignesh Subbian, PhD, College of Life Sciences and Engineering

This course surveys the field of biomedical informatics, including the effective uses of biomedical data collected from individuals (patients) and populations for scientific inquiry, problem solving, and decision making. In addition, ethical, legal, and social implications of medical informatics are covered, with emphasis on technology ethics, digital health regulations, and privacy laws. (3 Units)

**Introduction to Privacy**

*Instructor:* James Bambauer, JD, College of Law

This course explores a range of contexts in which the courts and other governmental authorities have attempted to give definition to a legal right to privacy. The right to privacy is puzzling and evolving area with technology advancement. Courts and policymakers grapple with the rules that ought to govern the collection and use of personal information. (3 Units)

**Data Privacy & Cybersecurity**

*Instructor:* John Howard, JD, College of Law and UA Office for Research, Innovation, and Impact

Better understand data privacy and cybersecurity in the context of how companies structure contracts, protect intellectual property, and manage data privacy and compliance relationships. Specific topics include clinical research, personal risk management, data privacy, data security, and data security breaches. (3 Units)
Better understand and navigate the drug development process, including the full range of drug regulation from discovery, innovative drug development tools, and the post-approval phase. The course includes the Food and Drug Administration and international regulatory perspectives on bringing drugs through clinical trials to market in the U.S. and abroad. (3 Units)

How can a doctrinal regulatory science education be translated and applied to real world challenges? In this course, students will explore and apply live regulatory science to the challenges faced every day by industry and regulatory decision makers. Leaders in the field will present case studies including realworld examples and work in teams to discuss and problem solve historic, current, and emerging topics in regulatory science. (3 Units)

This colloquium is offered two to four times per year and features leaders in the field presenting on cutting-edge issues in regulatory science. This course explores the role of executive agencies, such as the FDA, in ensuring safe and effective products to promote public health and address regulatory challenges. (1 Unit)

This course explains the ethical principles underlying regulations and guidance governing clinical trials, especially as the principles pertain to informed consent, disclosure, and conflict of interest. The course also outlines the elements and design of clinical trials, including federal regulations for research with human subject participants, including vulnerable populations, and international clinical trials. It concludes with the evolving role of research ethics in big data. (3 Units)

This course provides students with an overview of leadership and equity collaborations in the life sciences industry. The business, legal, and broader risk management concerns life science professionals must address to facilitate success in this complex and evolving industry are discussed. Relevant federal labor laws will be covered to provide a baseline legal framework that supports the needs of the field and the life sciences industry. Emerging trends in the field will also be covered. (3 Units)

This course examines the constitutional underpinnings of public health interventions. In addition, students will learn about the ethical and regulatory frameworks of local, state, tribal, and federal governments with respect to public health, and reflect on the balance between individual rights and governmental interests in protecting the public’s health. (3 Units)

Gain an overview of the scope of practice licensing and compliance requirements that govern health professionals, along with training in the role of expert witnesses in litigation from the perspectives of pre-trial, trial, and post-trial. (3 Units)

The right to privacy is puzzling and evolving area with technology advancement. Courts and policymakers grapple with the rules that ought to govern the collection and use of personal information. (3 Units)

This workshop will examine and discuss the key legal issues surrounding data privacy and security in the context of how companies develop, implement, and enforce their internal and external compliance and security policies. Specific topics include data retention and privacy; risk management; data security; and data security breaches. (3 Units)
HEALTH LAW & POLICY: YEAR-AT-A-GLANCE
Graduate/Undergraduate Course Offerings

Drug Discovery, Development & Innovation to Reach the Marketplace
Instructor: Huong Huynh, PhD, College of Law and Critical Path Institute

How can a didactic regulatory science education be translated and applied to real world challenges? In this course, students will interact and apply live problem solving to regulatory science to the challenges faced every day by industry and regulatory decision makers. Leaders in the field will present cases across multiple disciplines including project work in teams to discuss and solve problem historic, current and emerging topics in regulatory science. (3 Units)

Legal and Regulatory Aspects for Health Care Delivery
Instructor: Tracy Nuckolls, JD, College of Law

This course surveys the field of biomedical informatics, including the effective uses of biomedical data collected from individuals (patients) and populations for scientific inquiry, problem solving, and decision making. In addition, ethical, legal, and social implications of medical informatics are covered, with emphasis on technology ethics, digital health regulations, and privacy laws. (3 Units)

Clinical Research Ethics
Instructor: Mabel Crescioni, DrPH, JD, LLM, Colleges of Law & Public Health

This course explains the ethical principles underlying regulations and guidance governing clinical trials, especially as the principles pertain to informed consent, disclosure, and conflict of interest. The course also outlines the elements and design of clinical trials, including federal regulations for research with human subject participants, including vulnerable populations, and the over-regulation of scientific ethics. It concludes with the evolving role of research ethics in big data. (3 Units)

Leadership and Equity in the Life Sciences
Instructor: Law 571D, Law 478D
Instructor: Brian Santo, Esq., MPH, College of Law and National Committee for Quality Assurance

This course provides students with an overview of leadership and equity considerations in the life sciences industry. The business, legal, and broader risk management concerns life science professionals must address to facilitate success in this complex and evolving industry are discussed. Relevant federal laws will be provided to cover a baseline legal framework that supports the necessary transparency and accountability to the life sciences industry. Emerging trends in the field will also be covered. (3 Units)

Legal & Regulatory Fundamentals of Health Care Business
Instructor: Christopher Mathis, JD, MPA, MPH, College of Law

This course explains the constitutional understandings of public health interventions. In addition, students will learn about health care regulations from local, state, tribal, and federal governments with respect to public health, and reflect on the balance between individual rights and governmental needs in protecting the public’s health. (3 Units)

Translational Pathways for Medical Devices
Instructor: Marco Scirto, PhD, College of Law and Critical Path Institute

Transplantation focuses on the progress of medical devices from conceptualization to the bedside. There are a myriad of stakeholders and steps involved in this translational process: from severalCould you paraphrase the section on Clinical Research Ethics, providing a brief summary of its main focus and objectives? The Clinical Research Ethics course aims to explain the ethical principles underlying regulations and guidance governing clinical trials, with a focus on the principles that pertain to informed consent, disclosure, and conflict of interest. It also outlines the elements and design of clinical trials, including federal regulations for research with human subject participants, including vulnerable populations, and the over-regulation of scientific ethics. The course concludes with the evolving role of research ethics in big data. The course is designed to be a 3-credit unit, providing students with a comprehensive understanding of ethical principles and their application in the context of clinical research.

Could you provide a brief summary of the Translational Pathways for Medical Devices course? The Translational Pathways for Medical Devices course focuses on the progress of medical devices from conceptualization to the bedside. It covers the involvement of various stakeholders and steps involved in the translational process, including regulatory considerations and ethical principles. The course is designed to cover a broad spectrum of topics related to medical devices, providing students with a comprehensive understanding of the field. It is a 3-credit unit.

How does the Legal and Regulatory Aspects for Health Care Delivery course build on the knowledge gained in the Clinical Research Ethics course? The Legal and Regulatory Aspects for Health Care Delivery course builds on the knowledge gained in the Clinical Research Ethics course by focusing on the legal and regulatory aspects of health care delivery. It covers the fundamental incentives for development in the biomedical space, including federal regulations for research with human subject participants, including vulnerable populations, and the over-regulation of scientific ethics. The course also outlines the evolving role of research ethics in big data. This course is a 3-credit unit, providing students with a deeper understanding of the legal and regulatory frameworks governing health care delivery.
University of Arizona Law’s Health Law & Policy program is composed of more than 35 online course offerings across four Certificate programs, spanning Regulatory Science, Health Law for Health Professionals, Aging Law & Policy, and Health Information Privacy, Compliance and Data Security. Each Certificate requires a student to complete four courses for a total of 12 credit units. Students may substitute courses across Certificates to tailor a personalized program to meet personal and professional goals.
